

Frequently Asked Questions (FAQ)

DELWP's Open Data Service (WMS/WFS) migration

Frequently Asked Questions (FAQ)

In an attempt to improve DELWP's spatial services, our Enterprise Spatial Services (ESS) Transformation Program is rebuilding the Open Data Platform in AWS Cloud. This platform provides access to DELWP's spatial data via Web Map Services (WMS) and Web Feature Services (WFS). As a result of this improvement the access to services is changing.

This FAQ is for government agencies, organisations, and the general public who are currently sourcing DELWP's WMS and WFS from the legacy Open Data Platform. This FAQ provides a guide for the transition to the new AWS Cloud hosted service.

The benefits to moving this service to AWS Cloud are:

- Secure backup
- Scalable
- Highly available
- Disaster Recovery
- Cost effective
- Self service

Q. Who should read this document?

A. The target audience for this document are government agencies, organisations, and the general public who are currently sourcing DELWP's WMS and WFS services from the legacy platform.

Q. Who can access the web map/feature services?

A. Services are accessible via the internet by anyone but does require an understanding of spatial data and the use of Desktop or Server GIS to consume and view the WMS or WFS. All the data published using GeoServer will be *unclassified* Open Data therefore authentication is not mandatory. There will be no sensitive or classified data available via these services.

Q. Can I edit any of those data?

A. No. The services are read only. If you have identified any potential error with the data, please contact our support desk gis.helpdesk@delwp.vic.gov.

Q. Will all the WMS and WFS layers be available from the new service?

A. No. Unfortunately, not all the layers currently available will be migrated. In order to improve the maintainability of our service and data currency, layers derived from a subset of the source dataset will not be supported in the new Platform. However, you can achieve the same result by using a filter in your request for the source dataset.

Please refer to the table in Appendix A1 for the layers no longer available. Associated query will be provided to show how to access these data subsets as well.

Q. What are the new URLs?

A. The new URLs are as follows:

The existing WMS can be accessed via the link below:

http://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver/wms?request=getCapabilities

Frequently Asked Questions (FAQ)

The new WMS layers be accessed via the link below:

<https://opendata.maps.vic.gov.au/geoserver/ows?service=WMS&request=getCapabilities>

The existing WFS can be accessed via the link below:

https://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver/wfs?request=getCapabilities

The new WFS layers be accessed via the link below:

<https://opendata.maps.vic.gov.au/geoserver/ows?service=WFS&request=getCapabilities>

Q. How do I transition to the new service?

A To transition to the new service, replace your current URLs with the new URLs as follows:

1. Replace the:
 - a. current https://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver with the
 - b. new: <https://opendata.maps.vic.gov.au/geoserver/>
2. In the new service, all layer names are low case, so:
 - a. change the upper-case layer name in the request URL to lower case
3. In the new service the name space has changed:
 - a. change the namespace from datavic to open-data-platform
4. If any attributes are used in the request:
 - a. change the attribute name(s) to lower case as well
5. Test the connection and make sure the layer displays correctly
6. If the layer is not accessible:
 - a. check if the layer is no longer supported (refer to FAQ Appendix 1)
 - b. apply a filter in the query to the source dataset to retrieve the required data subset (refer to the Q&A below)

Q. What is an example of a new request compared to the current request?

A. The following is an example of a like for like replacement of potential requests to our Open Data Platform:

Current:

https://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver/wms?SERVICE=WMS&REQUEST=GetMap&FORMAT=image%2Fpng8&TRANSPARENT=true&LAYERS=VMPLAN_PLAN_ZONE&WIDTH=512&HEIGHT=512&CRS=EPSG%3A3857&STYLES=&BBOX=16114148,-4456584,16119040,-4451692

New:

https://opendata.maps.vic.gov.au/geoserver/wms?service=wms&request=getmap&format=image/png8&transparent=true&layers=plan_zone&width=512&height=512&crs=epsg%3a3857&styles=&bbox=16114148,-4456584,16119040,-4451692

Noting that:

Frequently Asked Questions (FAQ)

1. <https://services.land.vic.gov.au/catalogue/publicproxy/guest> changes to <https://opendata.maps.vic.gov.au>
2. “layers=data.vic:[uppercase dataset name]” changes to “layers=open-data-platform:[lowercase dataset name]”
3. Remove the schema name, which is normally the first word before and including the first “_”. For example, existing layer name “CATCHMENTS_BASIN100” will become “basin100”. Please find the matching new layer name for the existing layer name in Appendix of this FAQ. Please also note, there may be potential changes in layer names in the future, please use layer names returned from getCapabilities request (1st Q&A in this document) as the source of truth.
4. Services containing a subset of the source data are no longer supported as individual services, however, they can be accessed by applying a filter as described in the next Q&A. The list of effected services is in the Appendix of this FAQ.

Q Can I apply a filter to a request to return a subset of the source data?

A. Yes. Users can apply a query to filter data in the request URL.

As an example, below is a data request to filter cl_tenure_type layer where turnure_type_code = 'A'”

https://opendata.maps.vic.gov.au/geoserver/wms?request=getFeature&layers=open-data-platform:cl_tenure_type&cql_filter=tenure_type_code='A'

Please refer to the instruction from GeoServer website for detailed information:

For WMS: <https://docs.geoserver.org/latest/en/user/services/wms/vendor.html>

For WFS: <https://docs.geoserver.org/master/en/user/services/wfs/vendor.html#>

Q. Can I still access layers with the existing styles?

A. Yes, you can. For the layers migrated (excluding layers listed in append A1), the existing styles will still be available. However, ESS will no longer provide styling for newly published data in future. User may consider creating and applying their own styles when accessing map layers.

This is for the locality_polygon layer which has styling for the border colour

1. Default style – style name is not required

https://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver/wms?SERVICE=WMS&REQUEST=GetMap&FORMAT=image%2Fpng8&TRANSPARENT=true&LAYERS=VMLITE_LOCALITY_POLYGON&WIDTH=512&HEIGHT=512&CRS=EPSG%3A3857&STYLES=&BBOX=16114148.554967716%2C-4456584.4971389165%2C16119040.524777967%2C-4451692.527328665

This is the new request:

https://opendata.maps.vic.gov.au/geoserver/wms?service=wms&request=getmap&format=image%2Fpng8&transparent=true&layers=locality_polygon&width=512&height=512&crs=epsg%3a3857&styles=&bbox=16114148.554967716%2c-4456584.4971389165%2c16119040.524777967%2c-4451692.527328665

2. Customised Style – need to pass in the style name

https://services.land.vic.gov.au/catalogue/publicproxy/guest/dv_geoserver/wms?SERVICE=WMS&REQUEST=GetMap&FORMAT=image%2Fpng8&TRANSPARENT=true&LAYERS=VMLITE_LOCALITY_POLYGON&WIDTH=512&HEIGHT=512&CRS=EPSG%3A3857&STYLES=vml_loc_poly_2&BBOX=16114148.554967716%2C-4456584.4971389165%2C16119040.524777967%2C-4451692.527328665

Frequently Asked Questions (FAQ)

This is the new request:

https://opendata.maps.vic.gov.au/geoserver/wms?service=wms&request=getmap&format=image%2fpng8&transparent=true&layers=locality_polygon&width=512&height=512&crs=epsg%3a3857&styles=vml_loc_poly_2&bbox=16114148.554967716%2c-4456584.4971389165%2c16119040.524777967%2c-4451692.527328665

Q. How can I get help?

A. If you have enquiry in terms of accessing the new services or finding issues with our service, please contact our support desk gis.helpdesk@delwp.vic.gov.au. Please provide as much detail as possible about the issue encountered including screen grabs so that we can resolve it quickly.

However, if you need assistance in using WMS/WFS service in general, it is not part of our support function, please seek help from online resources, e.g., GeoServer Website.

Frequently Asked Questions (FAQ)

Appendix 1. Layer names changes

Total of 570 existing layers have been migrated or can be accessed by applying CQL filter on the source data layer. The table below lists the original layer names, which includes schema name as part of the layer name and the matching layer name from the new platform.

Some of the layers listed in this table will no longer be supported as individual services in the new platform, however they are still accessible by using a filter in the request to the source dataset. These layers were mostly subsets of its source dataset (i.e. a subset based on an attribute value like a service for all roads and another of only highways from the roads layer).

The filter is listed in the CQL Filter column below can be used to form the request. As an example, for CROWNLAND_PLM25_CMNWTH_LAND, the request can be formed as shown below:

WMS - layernames=plm25&cql_filter=mmgt_ongen='ALPINE RESORT'

WFS - typenames=plm25&cql_filter=mmgt_ongen='ALPINE RESORT'

Please note there may be changes in layer names in future, please refer to the layer names returned from the getCapabilities request as the source of truth.

Original Layer Name	New Layer Name	CQL_FILTER
