

## Supported Software

We recommend using QGIS Version 2.18 and later versions, when viewing spatial data in the GDA2020 datum.

We recommend downloading the latest version (3.4) from the [QGIS website](#).

Although these versions support viewing data in GDA2020 we recommend installation of the GDA2020 Grid Transformation files as follows to support transformation of data to and from GDA2020.

### Grid Transformations: ICSM plugin

To transform existing files to/from GDA2020 install a QGIS plugin [supplied by the ICSM](#). This will ensure accurate transformation using the recommended grid transformation file.

To install:

- Open the QGIS Plugins menu
- Select Manage and Install Plugins
- Look for and select the ICSM NTV2 Transformation under Plugins.

### More information

For more information on GDA2020 please visit the [ICSM GDA2020 website](#)
