

Supported Software

We recommend using ArcGIS 10.6 and ArcGIS Pro 2.1 when viewing spatial data in the GDA2020 datum.

We do not recommend incorporating GDA2020 data into any prior version of ArcGIS or ArcGIS Pro as this will cause projection issues due to the lack of transformations/reprojections in prior versions of the software.

Although ArcGIS 10.6 and ArcGIS Pro 2.1 support viewing data in GDA2020 we recommend installation of the GDA2020 Grid Transformation files as follows to support transformation of data to and from GDA2020.

Grid Transformations

Please follow this [ESRI blog post](#) to add GDA2020 Support to your ArcGIS installation (including ArcGIS 10.6 and ArcGIS Pro 2.1)

To install:

- Download the transformation grids from the [ICSM Github site](#).
- Rename the downloaded files to match the names expected by ArcGIS
- Copy the files into the appropriate application directory.

More information

For more information on GDA2020 please visit the [ICSM GDA2020 website](#)
